DM7426(SN7426) quad 2-input high voltage NAND gate

general description

The DM7426 is a quad two-input NAND gate with characteristics similar to the DM8810. It will interface standard TTL or DTL devices with lowthreshold MOS memories and other devices operating on 12V power supplies, and drive low-current relays and lamps within its voltage range. Features are:

- Open-collector output withstands 15V pullup
- Standard 5V V_{CC}
- Output sinks 16 mA for high fanout
- Same pin configuration as DM7400.
