## General Description

The DS1631 series of dual peripheral drivers was designed to be a universal set of interface components for CMOS circuits.

Each circuit has CMOS compatible inputs with thresholds that track as a function of  $V_{CC}$  (approximately  $\frac{1}{2} V_{CC}$ ). The inputs are PNP's providing the high impedance necessary for interfacing with CMOS.

Outputs have high voltage capability, minimum breakdown voltage is 56V at 250  $\mu$ A.

The outputs are Darlington connected transistors. This allows high current operation (300 mA max) at low internal  $V_{CC}$  current levels since base drive for the output transistor is obtained from the load in proportion to the required loading conditions. This is essential in order to minimize loading on the CMOS logic supply.

Typical  $V_{CC} = 5V$  power is 28 mW with both outputs ON.  $V_{CC}$  operating range is 4.5V to 15V.

The circuit also features output transistor protection if the  $V_{CC}$  supply is lost by forcing the output into the high impedance OFF state with the same breakdown levels as when  $V_{CC}$  was applied.

Pin-outs are the same as the respective logic functions found in the following popular series of circuits: DS75451, DS75461. This feature allows direct conversion of present systems to the MM74C CMOS family and DS1631 series circuits with great power savings.

The DS1631 series is also TTL compatible at  $V_{CC} = 5V$ .

## Features

- CMOS compatible inputs
  - High impedance inputs
  - High output voltage breakdown
  - High output current capability
  - Same pin-outs and logic functions as DS75451 and DS75461 series circuits
  - Low  $V_{CC}$  power dissipation (28 mW both outputs "ON" at 5V)
- PNP's  
56V min  
300 mA max

**Note 1:** "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. Except for "Operating Temperature Range" they are not meant to imply that the devices should be operated at these limits. The table of "Electrical Characteristics" provides conditions for actual device operation.

**Note 2:** Unless otherwise specified min/max limits apply across the  $-55^\circ C$  to  $+125^\circ C$  temperature range for the DS1631, DS1632, DS1633 and DS1634 and across the  $0^\circ C$  to  $+70^\circ C$  range for the DS3631, DS3632, DS3633 and DS3634. All typical values are for  $T_A = 25^\circ C$ .

**Note 3:** All currents into device pins shown as positive, out of device pins as negative, all voltages referenced to ground unless otherwise noted. All values shown as max or min on absolute value basis.
