MOS INTEGRATED CIRCUITS

QUAD 80-BIT STATIC SHIFT REGISTER

- SINGLE VOLTAGE SUPPLY: V_{CC} = 5V ± 5%
- DC to 3 MHz OPERATION GUARANTEED
- FULLY TTL COMPATIBLE
- FULLY DC OPERATION
- SINGLE LINE CLOCK
- PIN-FOR-PIN REPLACEMENT for MK 1007P-TMS 3409 2532 3347
- LOW POWER DISSIPATION: 250 mW (TYP.)
- INPUT GATE PROTECTION
- M142A IS A HIGH SPEED SELECTION

The M142 and M142A are quad 80-bit fully DC shift register constructed on a single chip using very low threshold N-channel silicon gate technology which allows high speed (3 MHz guaranteed) and fully TTL compatibility without using any external resistor.

Each of the four 80-bit registers has an independent input, output and recirculate control. The single clock line is common to all four registers.

Transferring data into the register is accomplished when the clock is high (logic "1") Shifting of data occurs when the clock goes low. Output data appears on the negative going edge of the clock.

When the recirculate line is high, data recirculates, while input is inhibited. When data is entered, the recirculate line is at logic "0".

Output data attain the same logic state that was shifted into the register 80 clocks prior. Available in 16-lead dual in-line plastic or ceramic package.

ABSOLUTE MAXIMUM RATINGS*

V_{CC}	Supply voltage	-0.5 to 7	٧
V_i	Input voltage on any pin	-0.5 to 7	V
T_{stg}	Storage temperature range	-65 to 150	°C
Top	Operating temperature range	0 to 70	°C

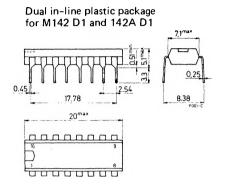

Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

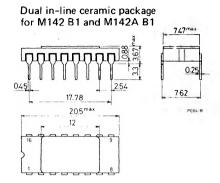

ORDERING NUMBERS:

M142 B1	for dual in-line plastic package
M142 D1	for dual in-line ceramic package
M142A B1	for dual in-line plastic package
M142A D1	for dual in-line ceramic package

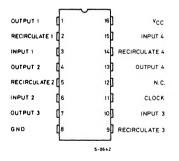

MECHANICAL DATA (dimensions in mm)

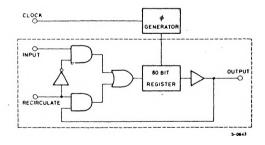

PIN CONNECTIONS

TRUTH TABLE (positive logic)

Recirculate	Input	Function	
"0"	"0"	"0" is writter	
"o" ["1"	"1" is written	
"1"	"0"	Recirculate	
"1"	"1"	Recirculate	

[&]quot;0" = 0V, "1" = 5V

STATIC ELECTRICAL CHARACTERISTICS ($V_{CC} = 5V \pm 5\%$, $T_{amb} = 0$ to 70°C unless otherwise specified)

	_					
Parameter		Test conditions	Min.	Тур.	Max.	Unit
V _{1H} *	Input high voltage		2		Vcc	V
V _{IL} *	Input low voltage		-0.3		0.8	V
Voн	Output high voltage	I _{OH} = -100 μA	2.4			V
VoL	Output low voltage	I _{OL} = 1,6 mA			0.4	V
ILI*	Input leakage current	V _i = V _{CC}			10	μА
Icc	Supply current			48		mA

^{*} These parameters apply to all inputs including clock.

DYNAMIC ELECTRICAL CHARACTERISTICS ($V_{CC} = 5V \pm 5\%$, $T_{amb} = 0$ to $70^{\circ}C$ unless otherwise specified)

	•	Tark	Total and distance		Values		
Parameter		Test	Test conditions		Тур.	Max.	Unit
f	Clock repetition rate				:	3	MHz
tφ pw1	Clock high pulse width			110		1	ns
tφ pw0	Clock low pulse width			220		1	ns
t _r , t _f	Clock rise and fall time		 			5	μs
t _{setup}	Setup time		·····	100			ns
thold	Hold time			80			ns
t _{sR}	Recirculate setup time			100			ns
thR	Recirculate hold time			80			ns
t _{Dr} , t _{Df}	Delay time to rise and fall	TTL load C _L = 10 pF	for M142 type for M142A type			230 160	ns ns
CiR	Recirculate input capacitance	V _i = 0V	f = 1 MHz			8	pF
$C_{oldsymbol{\phi}}$	Clock capacitance	Vφ= 0V	f = 1 MHz			12	pF

^{**} Typical values at T_{amb} = 25°C and V_{CC} = 5V.
