Rail-to-Rail Operational Amplifiers

The MC33201/2/4 family of operational amplifiers provide rail-to-rail operation on both the input and output. The inputs can be driven as high as 200 mV beyond the supply rails without phase reversal on the outputs, and the output can swing within 50 mV of each rail. This rail-to-rail operation enables the user to make full use of the supply voltage range available. It is designed to work at very low supply voltages (± 0.9 V) yet can operate with a supply of up to +12 V and ground. Output current boosting techniques provide a high output current capability while keeping the drain current of the amplifier to a minimum. Also, the combination of low noise and distortion with a high slew rate and drive capability make this an ideal amplifier for audio applications.

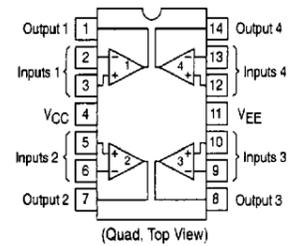

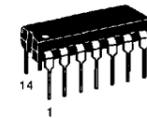

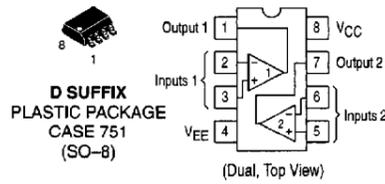

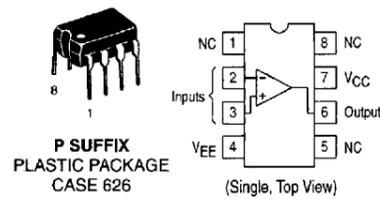

- Low Voltage, Single Supply Operation (+1.8 V and Ground to +12 V and Ground)
- Input Voltage Range Includes both Supply Rails
- Output Voltage Swings within 50 mV of both Rails
- No Phase Reversal on the Output for Over-driven Input Signals
- High Output Current ($I_{SC} = 80$ mA, Typ)
- Low Supply Current ($I_D = 0.9$ mA, Typ)
- 600 Ω Output Drive Capability
- Extended Operating Temperature Ranges (-40° to $+105^\circ\text{C}$ and -55° to $+125^\circ\text{C}$)
- Typical Gain Bandwidth Product = 2.2 MHz
- Offered in New TSSOP Package Including Standard SOIC and DIP Packages

ORDERING INFORMATION

Operational Amplifier Function	Device	Operating Temperature Range	Package

DC ELECTRICAL CHARACTERISTICS (T_A = 25°C)

Characteristic	V _{CC} = 2.0 V	V _{CC} = 3.3 V	V _{CC} = 5.0 V	Unit
Input Offset Voltage				mV
V _{IO} (max)				
MC33201	± 8.0	± 8.0	± 6.0	
MC33202	± 10	± 10	± 8.0	
MC33204	± 12	± 12	± 10	
Output Voltage Swing				V _{min} V _{max}
V _{OH} (R _L = 10 kΩ)	1.9	3.15	4.85	
V _{OL} (R _L = 10 kΩ)	0.10	0.15	0.15	
Power Supply Current per Amplifier (I _D)	1.125	1.125	1.125	mA

Specifications at V_{CC} = 3.3 V are guaranteed by the 2.0 V and 5.0 V tests. V_{EE} = Gnd.

MAXIMUM RATINGS

Rating	Symbol	Value	Unit
Supply Voltage (V _{CC} to V _{EE})	V _S	+13	V
Input Differential Voltage Range	V _{IDR}	(Note 1)	V
Common Mode Input Voltage Range (Note 2)	V _{CM}	V _{CC} + 0.5 V to V _{EE} - 0.5 V	V
Output Short Circuit Duration	t _s	(Note 3)	sec
Maximum Junction Temperature	T _J	+150	°C
Storage Temperature	T _{stg}	- 65 to +150	°C
Maximum Power Dissipation	P _D	(Note 3)	mW

- NOTES: 1. The differential input voltage of each amplifier is limited by two internal parallel back-to-back diodes. For additional differential input voltage range, use current limiting resistors in series with the input pins.
 2. The input common mode voltage range is limited by internal diodes connected from the inputs to both supply rails. Therefore, the voltage on either input must not exceed either supply rail by more than 500 mV.
 3. Power dissipation must be considered to ensure maximum junction temperature (T_J) is not exceeded. (See Figure 2)

General Information

The MC33201/2/4 family of operational amplifiers are unique in their ability to swing rail-to-rail on both the input and the output with a completely bipolar design. This offers low noise, high output current capability and a wide common mode input voltage range even with low supply voltages. Operation is guaranteed over an extended temperature range and at supply voltages of 2.0 V, 3.3 V and 5.0 V and ground.

Since the common mode input voltage range extends from V_{CC} to V_{EE} , it can be operated with either single or split voltage supplies. The MC33201/2/4 are guaranteed not to latch or phase reverse over the entire common mode range, however, the inputs should not be allowed to exceed maximum ratings.

Circuit Information

Rail-to-rail performance is achieved at the input of the amplifiers by using parallel NPN-PNP differential input stages. When the inputs are within 800 mV of the negative rail, the PNP stage is on. When the inputs are more than 800 mV greater than V_{EE} , the NPN stage is on. This switching of input pairs will cause a reversal of input bias currents (see Figure 6). Also, slight differences in offset voltage may be noted between the NPN and PNP pairs. Cross-coupling techniques have been used to keep this change to a minimum.

In addition to its rail-to-rail performance, the output stage is current boosted to provide 80 mA of output current, enabling the op amp to drive 600 Ω loads. Because of this high output current capability, care should be taken not to exceed the 150°C maximum junction temperature.
