

8-CHANNEL DATA SELECTOR

MC9300/MC8300 series

MC9312L*
MC8312L,P*

This 8-channel data selector is constructed from high-level and low-level gates interconnected as shown in the logic diagram. It is a logical implementation of a single pole, eight position switch with the switch position controlled by the state of the select inputs, A, B, and C. Complementary outputs are provided. The Enable input is active in the low state. When the Enable input is high, the Z output is high and the Z output low, regardless of the state of the other inputs.

ENABLE-INPUT INVERTER

LOW-LEVEL INVERTER

HIGH-LEVEL "AND-OR-INVERT" GATE (Complementary Outputs)

* L suffix = 16-pin dual in-line ceramic package (Case 620).
P suffix = 16-pin dual in-line plastic package (Case 612).

Test procedures are shown for only one input and one output. Test other inputs and outputs in a similar manner according to the truth table. Additionally, test all input-output combinations according to the truth table.

SWITCHING TIME TEST CIRCUIT AND VOLTAGE WAVEFORMS

**The coax delays from input to scope and output to scope must be matched. The scope must be terminated in 50-ohm impedance. The 950-ohm resistor and the scope termination impedance constitute a 20:1 attenuator probe. Coax shall be CT-070-50 or equivalent.

$C_T = 15$ pF = total parasitic capacitance, which includes probe and wiring capacitances.
