

# NCV7601

## Quad Driver

This automotive grade product provides a versatile interface between control logic and many types of loads. The inputs accept a wide range of control signal levels while the open-collector outputs feature independent thermal and current limiting. Integral transient suppression diodes are provided at all inputs and outputs.

### Features

- Operation in  $-40^{\circ}\text{C} - 125^{\circ}\text{C}$  Environment
- TTL/DTL/CMOS Compatible Inputs
- NAND Logic with Common Enable
- $V_{\text{CEX}} \geq 60\text{ V}$ ,  $V_{\text{CE(SUS)}} \geq 40\text{ V}$
- $V_{\text{CE(SAT)}} \leq 650\text{ mV @ } I_{\text{C}} = 600\text{ mA}$
- Thermally Efficient Fused-Lead Package
- Pin Compatible with:
  - CA3242/CA3262
  - UDx2543/UDx2549/UDx2559
  - L6220/L6221/L9222
- AEC Qualified
- PPAP Capable
- Pb-Free Package is Available\*

### Typical Applications

- Body and Drivetrain Electronics
- Incandescent Lamp/LED Loads
- Solenoid/Relay/Inductor Loads
- Heater/Resistor Loads
- Stepper/DC Motor Loads

### ABSOLUTE MAXIMUM RATINGS

Rating	Value	Unit
$V_{\text{CC}}$	-0.3 to 7.0	V
Logic Input Voltage (INA, INB, INC, IND, ENABLE)	-0.3 to 15	V
Power Output (OUTA, OUTB, OUTC, OUTD)	-0.3 to 60	V
Junction Temperature Range, $T_{\text{J}}$	-40 to 150	$^{\circ}\text{C}$
Storage Temperature Range	-55 to 150	$^{\circ}\text{C}$
ESD Susceptibility (Human Body Model)	2.0	kV
Package Thermal Resistance Junction-to-Case, $R_{\theta\text{JC}}$ Junction-to-Ambient, $R_{\theta\text{JA}}$	15 50	$^{\circ}\text{C/W}$ $^{\circ}\text{C/W}$
Lead Temperature Soldering: Wave Solder (through hole styles only) (Note 1)	260 peak	$^{\circ}\text{C}$

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.  
1. 10 second maximum.

## ELECTRICAL CHARACTERISTICS (4.0 V ≤ V<sub>CC</sub> ≤ 5.5 V, -40°C ≤ T<sub>J</sub> ≤ 125°C, unless otherwise specified.) Note 2

Characteristic	Test Conditions	Min	Typ	Max	Unit
<b>GENERAL</b>					
V <sub>CC</sub> Supply Current	Outputs Off, V <sub>CC</sub> = 5.5 V Note 3 I <sub>OUT</sub> = 600 mA, V <sub>CC</sub> = V <sub>IN</sub> = 5.5 V (four outputs on) (one output on)	-	-	5.0	mA
		-	-	65	mA
		-	-	20	mA
<b>OUTPUT DRIVERS</b>					
Saturation Voltage	I <sub>OUT</sub> = 600 mA, V <sub>IN</sub> = 2.0 V, V <sub>CC</sub> = 4.0 V	-	-	650	mV
Leakage Current	V <sub>OUT</sub> = 60 V, V <sub>IN</sub> = 0.8 V, V <sub>CC</sub> = 5.5 V	-	-	50	μA
Current Limit	4.5 V < V <sub>OUT</sub> < 16 V, V <sub>CC</sub> = 5.0 V	-	-	1.8	A
Thermal Shutdown	-	150	180	210	°C
Sustaining Voltage, V <sub>CE(SUS)</sub>	V <sub>CC</sub> = 5.5 V	40	-	-	V
<b>CLAMP DIODES</b>					
Forward Voltage	I <sub>F</sub> = 1.5 A, V <sub>CC</sub> = 5.5 V	-	-	2.0	V
Leakage Current	V <sub>R</sub> = 60 V, V <sub>CC</sub> = 5.5 V	-	-	100	μA
<b>INPUT</b>					
Input Current	0 V ≤ V <sub>IN</sub> ≤ V <sub>CC</sub>	-2.0	-	10	μA
Input High Voltage	I <sub>OUT</sub> = 600 mA	2.0	-	-	V
Input Low Voltage	I <sub>OUT</sub> = 600 mA	-	-	0.8	V
<b>AC CHARACTERISTICS (Note 4)</b>					
Turn-On Delay, Turn-Off Delay	I <sub>OUT</sub> = 500 mA	-	-	10	μs

2. Designed to meet these characteristics over the stated temperature range, though may not be 100% parametrically tested in production.

3. Pulse test.

4. Input rise time ≤ 10 ns, falltime ≤ 10 ns, measured at 50% points.

DETAILED OPERATING DESCRIPTION

The NCV7601 Quad Driver consists of four identical driver sections with output clamp diodes and a common bias generator.

Each driver input (Figure 2) is buffered by a PNP emitter follower for reduced input bias current and features a nominal 18 V Zener input clamp for transient protection. Each input is compared to a separate temperature-compensated reference, which provides a nominal 1.35 V comparison threshold. With the addition of an external series resistor, the inputs can be interfaced directly to +14 V automotive system voltages. Floating inputs are interpreted as high.

Each driver output NPN is supplied with a substantially fixed base current from the +5.0 V V<sub>CC</sub> pin by a pre-driver.

Each pre-driver multiplies a temperature-compensated reference current when its control input and the common enable input is high. Current limit and thermal limit circuits act independently within the pre-driver to reduce base drive to the output NPN. The independent limit operation allows the driver to handle inrush current from lamp loads while protecting the driver from fault conditions that exist long enough to raise the temperature at that driver to its thermal limit threshold. Each driver has its own temperature-sensing device located in close proximity to the output NPN. The separate sensing devices are strategically placed at the corners of the die to reduce interaction between them.

APPLICATIONS INFORMATION

The NCV7601 Quad Driver interfaces high power loads to low power control signals. The four open-collector NAND drivers with common ENABLE are TTL, DTL and CMOS compatible. Any number of drivers may be parallel connected to drive loads greater than each driver’s nominal capability. Power for the Quad’s control logic and output pre-drive is supplied from the +5.0 V V<sub>CC</sub> pin, and is proportional to the number of active inputs. Minimum standby power is consumed when the ENABLE input is low. Each driver is individually protected with current limit and thermal limit circuitry. Drivers with fault loads are protected while drivers with normal loads continue to operate, provided that sufficient heat sinking maintains a good thermal gradient between all drivers.

Clamp diodes at each driver output provide a means for managing inductive load transients. The common cathode pin for each driver pair can be connected to the load supply voltage for suppression of minor transients resulting from

wiring harness inductances. The use of an external Zener diode or TVS (Transient Voltage Suppressor) device such as the ON Semiconductor 1.5SMCXXXAT3 series is strongly recommended when driving large inductive loads or when load supply transients can be expected to exceed the Quad Driver’s VCE(SUS) rating. The use of a TVS device provides an additional benefit by reducing the decay time of inductive loads. More information on safeguarding the Quad’s output NPN’s and about transient suppression methods and device selection is available in ON Semiconductor application notes “Understanding Power Transistors Breakdown Parameters”, document number AN1628/D, “A Review of Transients and their Means Of Suppression”, document number AN843/D and “Transient Power Capability of Zener Diodes”, document number AN784/D. All application notes are available through the Literature Distribution Center or via our website at <http://www.onsemi.com>.
