

CMOS 8-Bit Microcontroller

TMP86PM74AFG

The TMP86PM74A is a OTP type MCU which includes 32-Kbyte one-time PROM. It is a pin compatible with a mask ROM product of the TMP86CK74A/CM74A. Writing the program to built-in PROM, the TMP86PM74A operates as the same way as the TMP86CK74A/CM74A. Using the Adapter socket, you can write and verify the data for the TMP86PM74A with a general-purpose PROM programmer same as TC571000D/AD.

- For a discussion of how the reliability of microcontrollers can be predicted, please refer to Section 1.3 of the chapter entitled Quality and Reliability Assurance / Handling Precautions.
- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property.
In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc..
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in this document shall be made at the customer's own risk.
- The products described in this document are subject to the foreign exchange and foreign trade laws.

Pin Function

The TMP86PM74A has MCU mode and PROM mode.

(1) MCU mode

In the MCU mode, the TMP86PM74A is a pin compatible with the TMP86CK74A/CM74A (Make sure to fix the TEST pin to low level).

(2) PROM mode

Pin name (PROM mode)	Input/Output	Functions	Pin Name (MCU mode)
A16 to A12	Input	Input of Memory address for program	PD4 to PD0
A11 to A8			P53 to P50
A7 to A0			P47 to P40
D7 to D0	I/O	Input/Output of Memory data for program	P07 to P00
$\overline{CE}$	Input	Chip enable	P12
$\overline{OE}$		Output enable	P13
$\overline{PGM}$		Program control	P14
VPP	Power supply	+ 12.75 V/5 V (Power supply of program)	TEST
VDD		+ 6.25 V/5 V	VDD
GND		0 V	VSS
P11, P21	I/O	PROM mode setting pin. Fix to high.	
P10, P20, P22, AVSS, VAREF		PROM mode setting pin. Fix to low.	
RESET			
XIN	Input	Self oscillation with resonator (10 MHz)	
XOUT	Output		

Operation

This section describes the functions and basic operational blocks of TMP86PM74A.

The TMP86PM74A has PROM in place of the mask ROM which is included in the TMP86CK74A/CM74A.

In addition, TMP86PM74A operates as the single clock mode when releasing reset.

When using the dual clock mode, oscillate a low-frequency clock by [SET (SYSCR2). XTEN] command at the beginning of program.

1. Operating Mode

The TMP86PM74A has MCU mode and PROM mode.

1.1 MCU Mode

The MCU mode is set by fixing the TEST/VPP pin to the low level. (TEST/VPP pin cannot be used open because it has no built-in pull-down resistor).

1.1.1 Program memory

The TMP86PM74A has a 32 Kbyte built-in one time PROM (addresses 8000_H to FFFF_H in the MCU mode, addresses 0000_H to 7FFF_H in the PROM mode).

When using TMP86PM74A for evaluation of mask ROM products, the program is written in the program storing area shown in Figure 1-1.

Figure 1-1. Program Memory Area

Note : The area that is not in use should be set data to FFH, or a general-purpose PROM programmer should be set only in the program memory area to access.

	Output Current (Total)		ΣI _{OUT1}	P0, P1, P2, P3, P4, P5 ports	120
			ΣI _{OUT2}	P6, P7, P8, P9, PD ports	– 120
Power Dissipation [T _{opr} = 25°C]		PD		1200	mW
Soldering Temperature (time)		T _{sld}		260 (10 μ)	°C
Storage Temperature		T _{stg}		– 55 to 125	
Operating Temperature		T _{opr}		– 30 to 70	

Note: The absolute maximum ratings are rated values which must not be exceeded during operation, even for an instant. Any one of the ratings must not be exceeded. If any absolute maximum rating is exceeded, a device may break down or its performance may be degraded, causing it to catch fire or explode resulting in injury to the user. Thus, when designing products which include this device, ensure that no absolute maximum rating value will ever be exceeded.

Note: The recommended operating conditions for a device are operating conditions under which it can be guaranteed that the device will operate as specified. If the device is used under operating conditions other than the recommended operating conditions (supply voltage, operating temperature range, specified AC/DC values etc.), malfunction may occur. Thus, when designing products which include this device, ensure that the recommended operating conditions for the device are always adhered to.

DC Characteristics (1)

Full Scale Error			–	–	± 1	
Total Error			–	–	± 2	

Note 1: The total error includes all errors except a quantization error, and is defined as a maximum deviation from the ideal conversion line.

Note 2: Conversion time is different in recommended value by power supply voltage.
About conversion time, please refer to "2.11.2 Register Configuration".

Note 3: Please use input voltage to AIN input Pin in limit of V_{AREF} – V_{SS}.
When voltage of range outside is input, conversion value becomes unsettled and gives affect to other channel conversion value.

Note 4: Analog Reference Voltage Range: ΔV_{AREF} = V_{AREF} – V_{SS}

High-speed program writing

Note 1: The power supply of V_{PP} (12.75 V) must be set power-on at the same time or the later time for a power supply of V_{DD} and must be clear power-on at the same time or early time for a power supply of V_{DD} .

Note2 : The pulling up/down device on the condition of $V_{PP} = 12.75\text{ V} \pm 0.25\text{ V}$ causes a damage for the device. Do not pull up/down at programming.

Note3 : Use the recommended adapter and mode.

Using other than the above condition may cause the trouble of the writting.

Note 1: An electrical shield by metal shield plate on the surface of IC package is recommended in order to protect the device from the high electric field stress applied from CRT (Cathodic Ray Tube) for continuous reliable operation.

Note2: When using the device (oscillator) in places exposed to high electric fields such as cathode-ray tubes, we recommend electrically shielding the package in order to maintain normal operating condition.

Note 3: The product numbers and specifications of the resonators by Murata Manufacturing Co., Ltd. are subject to change.
