

## CMOS 8-Bit Microcontroller

## TMP88PS43F

The TMP88PS43F is a high-speed, high-function 8-bit single-chip microcomputer incorporating 64-Kbyte one-time PROM. This microcomputer is pin compatible with the TMP88CS43, the mask ROM product. Once a program is written into its internal PROM, this microcomputer operates the same way as the TMP88CS43. By using an adapter socket, the TMP88PS43 can be programmed and verified with a general-purpose PROM programmer in the same way as for the TC571000D/AD.

- For a discussion of how the reliability of microcontrollers can be predicted, please refer to Section 1.3 of the chapter entitled Quality and Reliability Assurance / Handling Precautions.
- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc..
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in this document shall be made at the customer's own risk.

## Pin Functions

The TMP88PS43 has MCU and PROM modes.

(1) MCU mode

Pin compatible with the TMP88CS43 (always makes sure the TEST pin is fixed low).

(2) PROM mode

Pin Name (during PROM Mode)	I/O	Functions	Pin Name (during MCU Mode)
A16	Input	Program memory address input	P12
A15 to A8			P47 to P40
A7 to A0			P67 to P60
D7 to D0	Input/output	Program memory data input/output	P37 to P30
$\overline{CE}$	Input	Chip enable signal input	P13
$\overline{OE}$		Output enable signal input	P14
$\overline{PGM}$		Program mode signal input	P15
VPP	Power supply	+ 12.75 V/5 V (Programming power supply)	TEST
VDD		+ 6.25 V/5 V	VDD
GND		0 V	VSS
P03 to P00	Input/output	Leave these pins open.	
P17 to P16			
P57 to P50			
P77 to P70			
P87 to P80			
P97 to P90			
P21		PROM mode setup pins. Fix these pins high.	
P11 to P10		PROM mode setup pins. Fix these pins low.	
P22, P20			
$\overline{RESET}$			
XIN	Input	Attach a resonator (20 MHz) to these pins for self-oscillation.	
XOUT	Output		
AVDD	Power supply	5 V	
VAREF		0 V (GND)	
VASS			

## Functional Description

The TMP88PS43 is a one-time PROM version of the TMP88CS43 with its internal mask ROM replaced with one-time PROM. All other configurations and functions are the same as those of the TMP88CS43. (TMP88CS43 RAM size is 2 K + 128 bytes.) Immediately after a reset, the TMP88PS43 is in single-clock mode.

### 1. Operation Modes

The TMP88PS43 has MCU and PROM modes.

#### 1.1 MCU Mode

The microcomputer is placed in MCU mode by fixing the TEST and VPP pins low.

In this mode, the microcomputer operates the same way as the TMP88CS43 (because the TEST and VPP pins do not have internal pulldown resistors, they cannot be left open while in use).

##### 1.1.1 Program Memory

The TMP88PS43 contains a 64-Kbyte one-time PROM (located at addresses 04000 to 13EFF<sub>H</sub> or addresses FFF00 to FFFF<sub>H</sub> during MCU mode and addresses 00000 to 0FFFF<sub>H</sub> during PROM mode). When using this microcomputer for the purpose of evaluating the system constructed with the TMP88CS43, write a program into the program storage area shown in Figure 1-1.

Figure 1-1. Program Storage Area

Note: Fill the unused area with data FF<sub>H</sub>, or set up the general-purpose PROM programmer so that only the program storage area will be accessed.

#### 1.1.2 Data Memory

The TMP88PS43 contains 4 K + 128-byte data memory (static RAM).

Note: TMP88CS43 contains 2K + 128 bytes.

#### 1.1.3 Input/Output Circuits of the Pins

##### (1) Control pins

The control pins are the same as those of the TMP88CS43, except that the TEST pin does not have an internal pulldown resistor.

##### (2) Input/output ports

The input/output circuits of the TMP88PS43 input/output ports are the same as those of the TMP88CS43.

## Electrical Characteristics

## Absolute Maximum Ratings

(V<sub>SS</sub> = 0V)

Note: The Absolute Maximum Ratings stipulate the standards, any parameter of which cannot be exceeded even in an instant. If the device is used under conditions exceeding the Absolute Maximum Ratings, it may break down or degrade, causing injury due to rupture or burning. Therefore, always make sure the Absolute Maximum Ratings will not be exceeded when designing your application equipment.

## Recommended Operating Conditions

(V<sub>SS</sub> = 0 V, Topr = - 40 to 85°C)

Parameter	Symbol	Pin	Condition	Min	Max	Unit
Power Supply Voltage	V <sub>DD</sub>		fc = 20 MHz NORMAL/IDLE/ STOP	4.5	5.5	V
High Level Input Voltage	V <sub>IH1</sub>	Normal (P6, P7, P8, P9)	V <sub>DD</sub> ≥ 4.5 V	V <sub>DD</sub> × 0.70	V <sub>DD</sub>	
	V <sub>IH2</sub>	Hysteresis (P0, P1, P2, P3, P4, P5)		V <sub>DD</sub> × 0.75		
Low Level Input Voltage	V <sub>IL1</sub>	Normal (P6, P7, P8, P9)	V <sub>DD</sub> ≥ 4.5 V	0	V <sub>DD</sub> × 0.30	
	V <sub>IL2</sub>	Hysteresis (P0, P1, P2, P3, P4, P5)		V <sub>DD</sub> × 0.25		
Clock Frequency	fc	XIN, XOUT	V <sub>DD</sub> = 4.5 V to 5.5 V	8	20	MHz

Note: The Recommended Operating Conditions show the conditions under which we recommend the device be used in order for it to operate normally while maintaining its quality. If the device is used outside the range of Recommended Operating Conditions (power supply voltage, operating temperature range, or AC/DC rated values), it may operate erratically. Therefore, when designing your application equipment, always make sure its intended working conditions will not exceed the range of Recommended Operating Conditions.

## High-speed program

**Note 1:** The power supply of  $V_{pp}$  (12.75 V) must be set power-on at the same time or the later time for a power supply of  $V_{CC}$  and must be clear power-on at the same time or early time for a power supply of  $V_{CC}$ .

**Note 2:** The pulling up/down device on the condition of  $V_{pp} = 12.75 \text{ V} \pm 0.25 \text{ V}$  causes a damage for the device. Do not pull up/down at programming.

**Note 3:** Use the recommended adapter (see 1.2.2 (1)) and mode (see 1.2.2 (3) i).

Using other than the above condition may cause the trouble of the writing.
