

LOW INPUT VOLTAGE, DUAL LOAD SWITCH WITH CONTROLLED TURN-ON

Check for Samples: [TPS22960](#)

FEATURES

- **Integrated Dual Load Switch**
- **Input Voltage Range: 1.62 V to 5.5 V**
- **Low ON-State Resistance**
 - $r_{ON} = 342\text{ m}\Omega$ at $V_{IN} = 5.5\text{ V}$
 - $r_{ON} = 435\text{ m}\Omega$ at $V_{IN} = 3.3\text{ V}$
 - $r_{ON} = 523\text{ m}\Omega$ at $V_{IN} = 2.5\text{ V}$
 - $r_{ON} = 737\text{ m}\Omega$ at $V_{IN} = 1.8\text{ V}$
- **500-mA Maximum Continuous Switch Current**
- **Low Quiescent Current and Shutdown Current**
- **Controlled Switch Output Rise Time: 75 μs or 660 μs**
- **Integrated Quick Output Discharge Transistor**
- **ESD Performance Tested Per JESD 22**
 - **2000-V Human-Body Model (A114-B, Class II)**
 - **1000-V Charged-Device Model (C101)**
- **8-Pin SOT (DCN) Package: 3 mm $\times$ 3 mm**
- **8-Pin μQFN (RSE) Package: 1.5 mm $\times$ 1.5 mm**

DESCRIPTION

The TPS22960 is a small low- r_{ON} dual load switch with controlled turn on. The devices contain two P-channel MOSFETs that can operate over an input voltage range of 1.62 V to 5.5 V. Each switch is controlled by an on/off input (ON1 and ON2), which is capable of interfacing directly with low-voltage control signals. In TPS22960 a 85- Ω on-chip load resistor is added for output quick discharge when switch is turned off.

The rise time (slew-rate) of the device is internally controlled in order to avoid inrush current and can be slowed down if needed using the SR pin: TPS22960 feature a 75 μs rise time with the SR pin tied to ground and 660 μs with the SR pin tied to high.

The TPS22960 is available in a space-saving 8-pin μQFN package and in an 8-pin SOT package. It is characterized for operation over the free-air temperature range of -40°C to 85°C .

APPLICATIONS

- **GPS Devices**
- **Cell Phones/PDAs**
- **MP3 Players**
- **Digital Cameras**

DEVICE	r_{ON} AT 3.3 V (TYP)	SLEW RATE AT 3.3 V (TYP)	QUICK OUTPUT DISCHARGE ⁽¹⁾	MAX OUTPUT CURRENT	ENABLE
TPS22960	435 m Ω	75 μs with SR = low 660 μs with SR = high	Yes	500 mA	Active High

(1) This feature discharges the output of the switch to ground through a 85- Ω resistor, preventing the output from floating.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of the Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

Copyright © 2009–2011, Texas Instruments Incorporated

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

ORDERING INFORMATION

TERMINAL FUNCTIONS

TERMINAL			DESCRIPTION
DCN PIN NO.	RSE PIN NO.	NAME	
1	1	V _{IN1}	Switch 1 input; bypass this input with a ceramic capacitor to GND
2	2	ON1	Switch 1 control input, active high. Do not leave floating.
3	7	ON2	Switch 2 control input, active high. Do not leave floating.
4	8	V _{IN2}	Switch 2 input; bypass this input with a ceramic capacitor to GND
5	5	V _{OUT2}	Switch 2 output
6	6	GND	Ground
7	3	SR	Slew rate control pin. SR = GND translates into a 75-μs rise time; SR = high translates into a 660-μs rise time
8	4	V _{OUT1}	Switch 1 output

ABSOLUTE MAXIMUM RATINGS⁽¹⁾

		MIN	MAX	UNIT
V_{IN}	Input voltage range	-0.3	6	V
V_{OUT}	Output voltage range		$V_{IN} + 0.3$	V
V_{ON}	Input voltage range	-0.3	6	V
I_{MAX}	Maximum continuous switch current		0.5	A
T_A	Operating free-air temperature range	-40	85	°C

Figure 28. Test Circuit and t_{ON}/t_{OFF} Waveforms

APPLICATION INFORMATION

ON/OFF Control

The ON pin controls the state of the switch. Activating ON continuously holds the switch in the on state so long as there is no fault. ON is active HI and has a low threshold making it capable of interfacing with low voltage signals. The ON pin is compatible with standard GPIO logic threshold. It can be used with any microcontroller with 1.2-V, 1.8-V, 2.5-V, or 3.3-V GPIOs.

Input Capacitor

To limit voltage drop or voltage transients, a capacitor needs to be placed between V_{IN} and GND. A 1- μ F ceramic capacitor, C_{IN} , placed close to the pins is usually sufficient, but higher values of C_{IN} can be used. When switching heavy loads, it is recommended to have an input capacitor about ten times higher than the output capacitor.

Output Capacitor

Due to the integral body diode in the PMOS switch, a C_{IN} greater than C_L is recommended. A C_L greater than C_{IN} can cause V_{OUT} to exceed V_{IN} when the system supply is removed. This could result in current flow through the body diode from V_{OUT} to V_{IN} .

Board Layout

For best performance, all traces should be as short as possible. To be most effective, the input and output capacitors should be placed close to the device to minimize the effects that parasitic trace inductances may have on normal and short-circuit operation. Using wide traces for V_{IN} , V_{OUT} , and GND will help minimize the parasitic electrical effects along with minimizing the case to ambient thermal impedance.

REVISION HISTORY

Changes from Original (April 2009) to Revision A	Page
• Changed r_{ON} values for $V_{INX} = 1.8\text{ V}$ (25°C) From: Typ 714, Max 855 To: Typ 737, Max 1100	5
• Changed r_{ON} values for $V_{INX} = 1.8\text{ V}$ (Full) From: Max 995 To: Max 1300	5
• Changed r_{ON} values for $V_{INX} = 1.62\text{ V}$ (25°C) From: Typ 830, Max 950 To: Typ 848, Max 1300	5
• Changed r_{ON} values for $V_{INX} = 1.62\text{ V}$ (Full) From: Max 1100 To: Max 1500	5

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

⁽⁴⁾ Only one of markings shown within the brackets will appear on the physical device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

 - B. This drawing is subject to change without notice.
 - C. QFN (Quad Flatpack No-Lead) package configuration.
 - D. This package complies to JEDEC MO-288 variation UECD.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
