200mA Low-Noise, High-PSRR Negative Output Low-Dropout Linear Regulators

FEATURES

- **Ultralow Noise: 60μV_{RMS} Typical**
- **High PSRR: 65dB Typical at 1kHz**
- **Low Dropout Voltage: 280mV Typical at 200mA, 2.5V**
- **Available in –2.5V and Adjustable (–1.2V to –10V) Versions**
- **Stable With a 2.2μF Ceramic Output Capacitor**
- **Less Than 2μA Typical Quiescent Current in Shutdown Mode**
- **2% Overall Accuracy (Line, Load, Temperature)**
- **Thermal and Over-Current Protection**
- **SOT23-5 (DBV) Package**
- **Operating Junction Temperature Range: –40°C to +125°C**

APPLICATIONS

- **Optical Drives**
- **Optical Networking**
- **Noise Sensitive Circuitry**
- **GaAs FET Gate Bias**
- **Video Amplifiers**

DESCRIPTION

The TPS723xx family of low-dropout (LDO) negative voltage regulators offers an ideal combination of features to support low noise applications. These devices are capable of operating with input voltages from –10V to –2.7V, and support outputs from –10V to –1.2V. These regulators are stable with small, low-cost ceramic capacitors, and include enable (EN) and noise reduction (NR) functions. Thermal short-circuit and over-current protections are provided by internal detection and shutdown logic. High PSRR (65dB at 1kHz) and low noise (60μV_{RMS}) make the TPS723xx ideal for low-noise applications.

The TPS723xx uses a precision voltage reference to achieve 2% overall accuracy over load, line, and temperature variations. Available in a small SOT23-5 package, the TPS723xx family is fully specified over a temperature range of –40°C to +125°C.

ORDERING INFORMATION(1)

PRODUCT	V_{OUT}(2)
TPS723*xxyyz*	**XX** is nominal output voltage (for example, 25 = 2.5V, 01 = Adjustable.) **YYY** is package designator. **Z** is package quantity.

(1) For the most current package and ordering information see the Package Option Addendum at the end of this document, or see the TI web site at www.ti.com.
(2) Output voltages from –1.2V to –9V in 100mV increments are available. Minimum order quantities apply; contact factory for details and availability.

ABSOLUTE MAXIMUM RATINGS(1)(2)

Over operating temperature range, unless otherwise noted.

	VALUE	UNITS
Input voltage range, V_{IN}	–11 to +0.3	V
Noise reduction pin voltage range, V_{NR}	–11 to +5.5	V
Enable voltage range, V_{EN}	$–V_{IN}$ to +5.5	V
Output voltage range, V_{OUT}	–11 to +0.3	V
Output current, I_{OUT}	Internally limited	
Output short-circuit duration	Indefinite	
Continuous total power dissipation, P_D	See Power Dissipation Ratings table	
Junction temperature range, T_J	–55 to +150	°C
Storage temperature range, T_{stg}	–65 to +150	°C

(1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) All voltage values are with respect to network ground terminal.

POWER DISSIPATION RATINGS

BOARD	PACKAGE	$R_{\theta JC}$	$R_{\theta JA}$	DERATING FACTOR ABOVE T_A = +25°c	$T_A \leq$ +25°c POWER RATING	T_A = +70°c POWER RATING	T_A = +85°c POWER RATING
Low-K(1)	DBV	64°C/W	255°C/W	3.9mW/°C	390mW	215mW	155mW
High-K(2)	DBV	64°C/W	180°C/W	5.6mW/°C	560mW	310mW	225mW

(1) The JEDEC Low-K (1s) board design used to derive this data was a 3 inch × 3 inch, two-layer board with 2-ounce copper traces on top of the board.
(2) The JEDEC High-K (2s2p) board design used to derive this data was a 3 inch × 3 inch, multilayer board with 1-ounce internal power and ground planes and 2-ounce copper traces on the top and bottom of the board.

ELECTRICAL CHARACTERISTICS

Over operating junction temperature range, $V_{IN} = V_{OUTnom} – 0.5V$, $I_{OUT} = 1mA$, $V_{EN} = 1.5V$, $C_{OUT} = 2.2\mu F$, and $C_{NR} = 0.01\mu F$, unless otherwise noted. Typical values are at $T_J = +25°C$.

PARAMETER			TEST CONDITIONS	TPS723xx			UNITS
				MIN	TYP	MAX

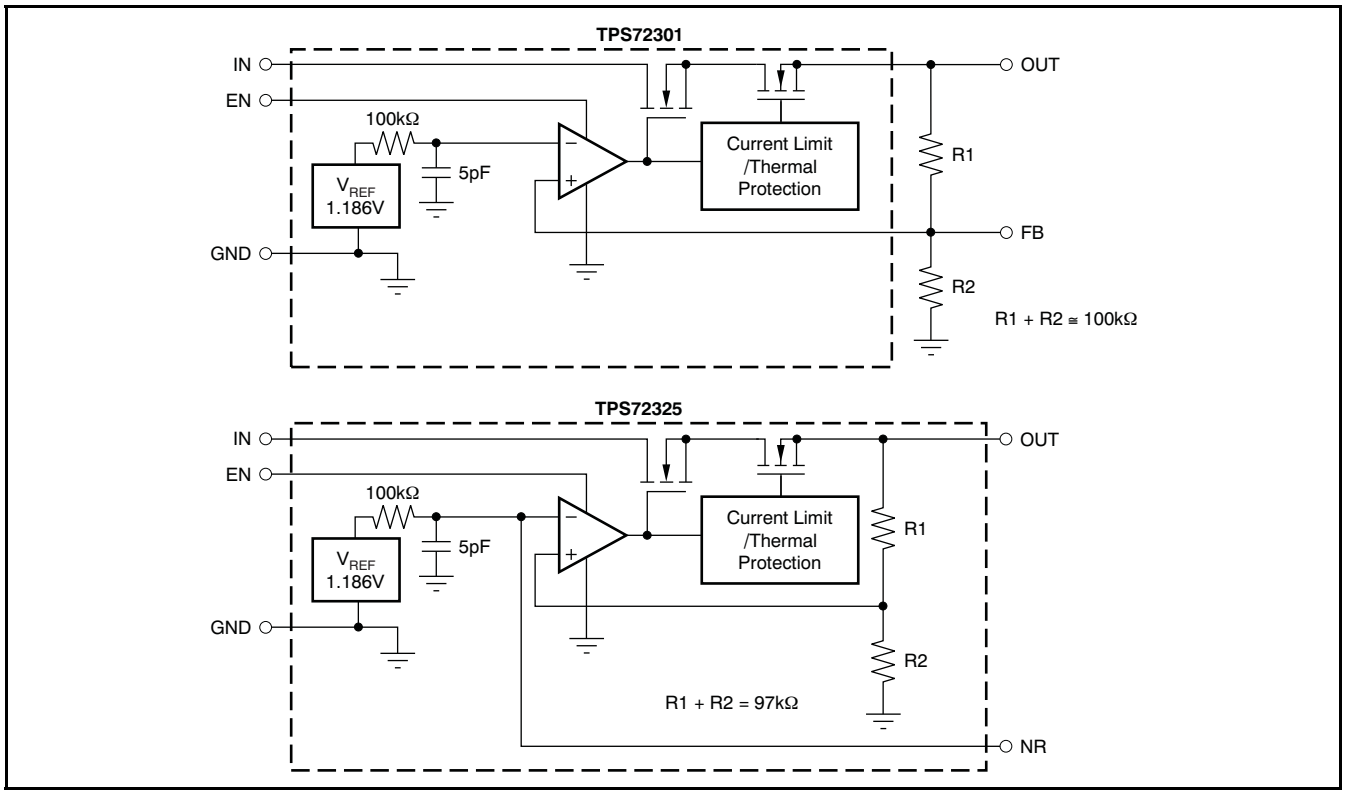
T_J	Operating junction temperature			–40		+125	°C

(1) Maximum $V_{IN} = (V_{OUT} – V_{DO})$ or – 2.7V, whichever is more negative.

FUNCTIONAL BLOCK DIAGRAM



TERMINAL FUNCTIONS

TERMINAL		DESCRIPTION
NAME	NO.	
GND	1	Ground
IN	2	Input supply
EN	3	Bipolar enable pin. Driving this pin above the positive enable threshold or below the negative enable threshold turns on the regulator. Driving this pin below the positive disable threshold and above the negative disable threshold puts the regulator into shutdown mode.
NR	4	Fixed voltage versions only. Connecting an external capacitor between this pin and ground, bypasses noise generated by the internal bandgap. This configuration allows output noise to be reduced to very low levels.
FB	4	Adjustable voltage version only. This pin is the input to the control loop error amplifier. It is used to set the output voltage of the device.
OUT	5	Regulated output voltage. A small 2.2µF ceramic capacitor is needed from this pin to GND to ensure stability.

APPLICATION INFORMATION

DEVICE OPERATION

The TPS723xx is a low-dropout negative linear voltage regulator with a rated current of 200mA. It is offered in trimmed output voltages between –1.5V and –5.2V and as an adjustable regulator from –1.2V to –10V. It features very low noise and high power-supply rejection ratio (PSRR), making it ideal for high-sensitivity analog and RF applications. A shutdown mode is available, reducing ground current to 2µA maximum over temperature and process. The TPS723xx is offered in a small SOT23 package and is specified over a –40°C to +125°C junction temperature range.

ENABLE

The enable pin is active above +1.5V and below –1.5V, allowing it to be controlled by a standard TTL signal or by connection to V_I if not used. When driven to GND most internal circuitry is turned off, putting the TPS723xx into shutdown mode, drawing 2µA maximum ground current.

ADJUSTABLE VOLTAGE APPLICATIONS

The TPS72301 allows designers to specify any output voltage from –10V to –1.2V. As shown in the application circuit in Figure 27, an external resistor divider is used to scale the output voltage (V_{OUT}) to the reference voltage. For best accuracy, use precision resistors for R1 and R2. Use the equations in Figure 27 to determine the values for the resistor divider.

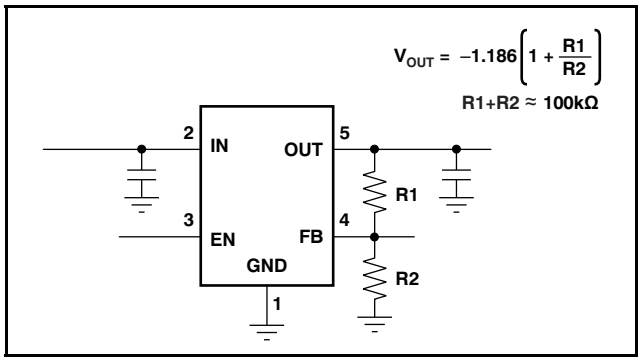

Figure 27. TPS72301 Adjustable LDO Regulator Programming

CAPACITOR SELECTION FOR STABILITY

Appropriate input and output capacitors should be used for the intended application. The TPS723xx only requires a 2.2µF ceramic output capacitor to be used for stable operation. Both the capacitor value and ESR affect stability, output noise, PSRR, and transient response. For typical applications, a 2.2µF ceramic output capacitor located close to the regulator is sufficient.

OUTPUT NOISE

Without external bypassing, output noise of the TPS723xx from 10Hz to 100kHz is 200μV_{RMS} typical. The dominant contributor to output noise is the internal bandgap reference. Adding an external 0.01µF capacitor to ground reduces noise to 60μV_{RMS}. Best noise performance is achieved using appropriate low ESR capacitors for bypassing noise at the NR and OUT pins. See Figure 21 in the Typical Characteristics section.

POWER-SUPPLY REJECTION

The TPS723xx offers a very high PSRR for applications with noisy input sources or highly sensitive output supply lines. For best PSRR, use high-quality input and output capacitors.

CURRENT LIMIT

The TPS723xx has internal circuitry that monitors and limits output current to protect the regulator from damage under all load conditions. When output current reaches the output current limit (550mA typical), protection circuitry turns on, reducing output voltage to ensure that current does not increase. See Figure 9 in the Typical Characteristics section.

Do not drive the output more than 0.3V above the input. Doing so will bias the body diode in the pass FET, allowing current to flow from the output to the input. This current is not limited by the device. If this condition is expected, care should be taken to externally limit the reverse current.

THERMAL PROTECTION

As protection from damage due to excessive junction temperatures, the TPS723xx has internal protection circuitry. When junction temperature reaches approximately +165°C, the output device is turned off. After the device has cooled by about 20°C, the output device is enabled, allowing normal operation. For reliable operation, design is for worst-case junction temperature of ≤ +125°C taking into account worst-case ambient temperature and load conditions.

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) Only one of markings shown within the brackets will appear on the physical device.

NOTES:
A. All linear dimensions are in millimeters.
B. This drawing is subject to change without notice.
C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
D. Publication IPC–7351 is recommended for alternate designs.
E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC–7525 for other stencil recommendations.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have ***not*** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
