

SCSI Active Terminator

FEATURES

- Complies with SCSI, SCSI-2 Standards
- 10pF Channel Capacitance During Disconnect
- Active Termination for 18 Lines
- Logic Command Disconnects all Termination Lines
- Low Supply Current in Disconnect Mode
- Trimmed Regulator for Accurate Termination Current
- Current Limit and Thermal Shutdown Protection
- 110 Ohm Termination
- Meets SCSI Hot Plugging

DESCRIPTION

The UC5601 provides precision resistive pull-up to a 2.9V reference for all 18 lines in a Small Computer Systems Interface (SCSI) bus cable. The SCSI-2 standard recommends active termination at both ends of every cable segment utilizing single ended drivers and receivers.

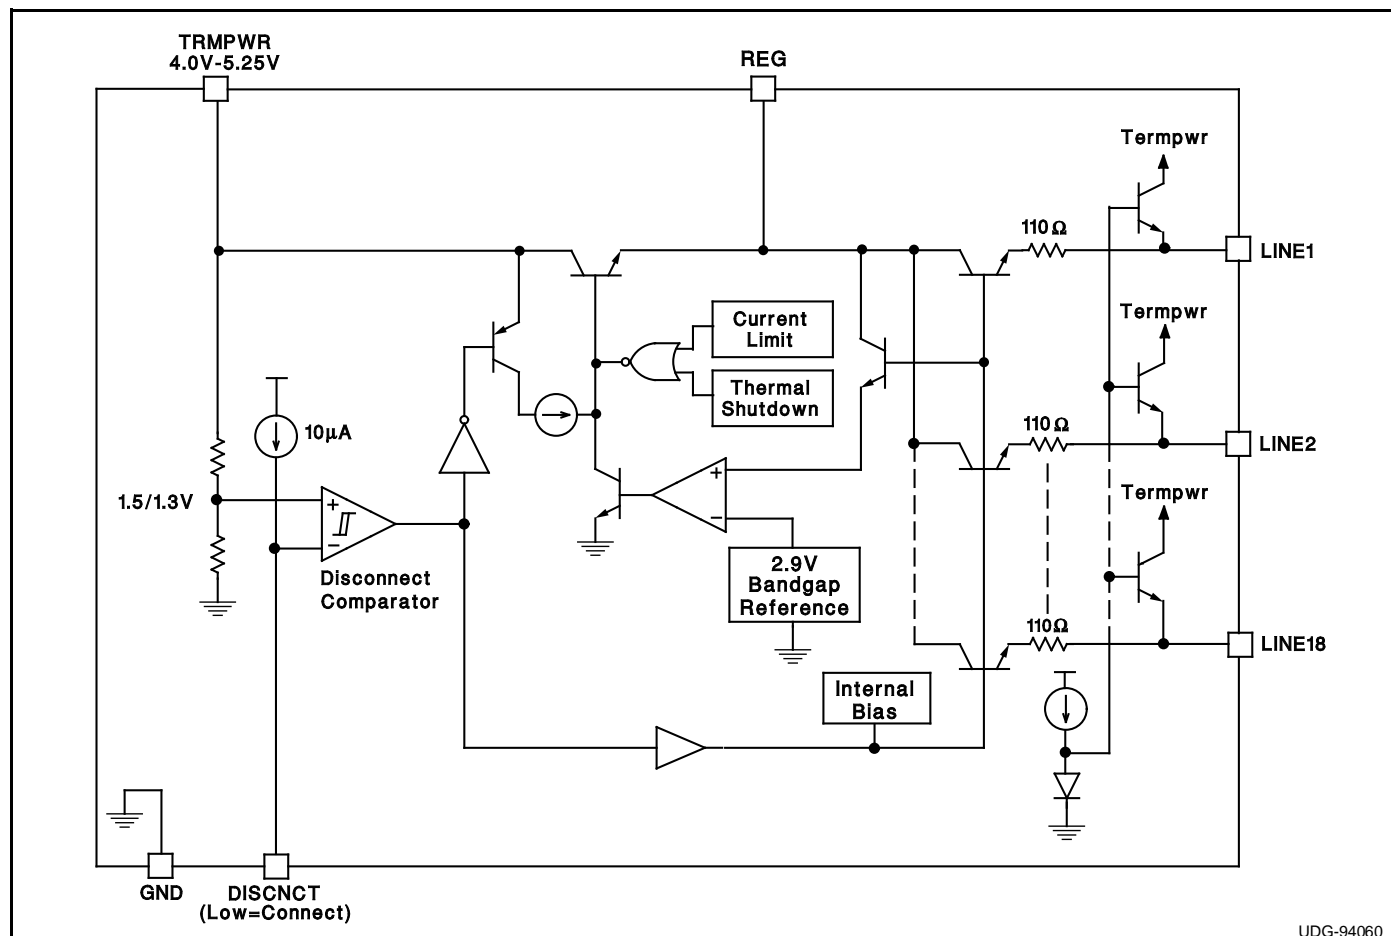

Internal circuit trimming is utilized, first to reduce resistor tolerances to $\pm 3\%$ and then to adjust the regulator's output voltage to insure termination current accuracy of $\pm 3\%$.

The UC5601 provides a disconnect feature which, upon a logic command, disconnects all terminating resistors, and turns off the regulator; greatly reducing standby power.

Other features include negative clamping on all signal lines, 20mA of active negation sink current capability, regulator current limiting, and thermal shut-down protection.

This device is offered in low thermal resistance versions of the industry standard 28 pin wide body SOIC and PLCC, as well as a 24 pin DIL plastic package.

BLOCK DIAGRAM

Circuit Design Patented

ABSOLUTE MAXIMUM RATINGS

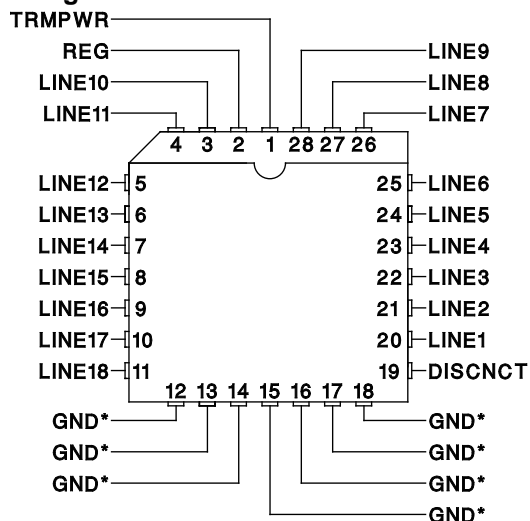

Tempwr Voltage +7V
 Signal Line Voltage..... 0V to +7V
 Regulator Output Current 1A
 Storage Temperature -65°C to +150°C
 Operating Temperature -55°C to +150°C
 Lead Temperature (Soldering, 10 Sec.) +300°C

Unless otherwise specified all voltages are with respect to Ground. Currents are positive into, negative out of the specified terminal.

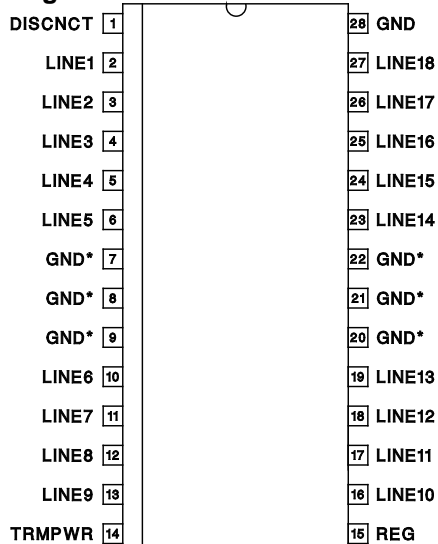

Consult Packaging Section of Unitrode Integrated Circuits data book for thermal limitations and considerations of packages.

RECOMMENDED OPERATING CONDITIONS

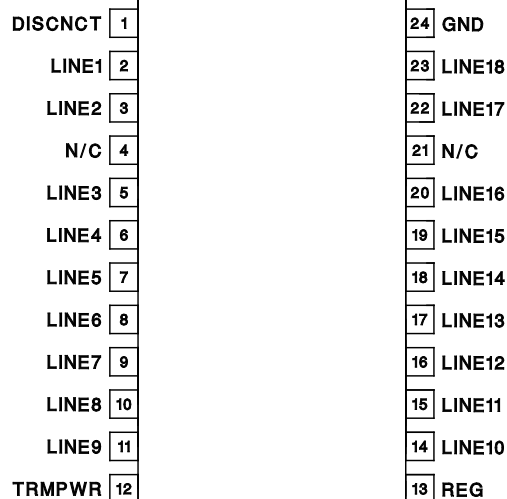

Tempwr Voltage 4.0V to 5.25V
 Signal Line Voltage..... 0V to +3V
 Disconnect Input Voltage 0V to Tempwr

CONNECTION DIAGRAMS**PLCC-28 (Top View)****QP Package**

* QP package pins 12 - 18 serve as both heatsink and signal ground.

SOIC-28 (Top View)**DWP Package**

* DWP package pin 28 serves as signal ground; pins 7, 8, 9, 20, 21, 22 serve as heatsink/ground.

DIL-24 (Top View)**N or J Package**

ELECTRICAL CHARACTERISTICS Unless otherwise stated, these specifications apply for $T_A = 0^{\circ}\text{C}$ to 70°C .
 $\text{TRMPWR} = 4.75\text{V}$, $\text{DISCNCT} = 0\text{V}$. $T_A = T_J$.

PARAMETER	TEST CONDITIONS			MIN	TYP	MAX	UNITS
Supply Current Section							
Tempwr Supply Current	All termination lines = Open				17	25	mA
	All termination lines = 0.5V				400	430	mA
Power Down Mode	DISCNCT = Open				100	150	μA
Output Section (Termination Lines)							
Termination Impedance	ΔLINE = -5mA to -15mA			107	110	113	Ω
Output High Voltage	VTRMPWR = 4V (Note 1)			2.65	2.9		V
Max Output Current	VLINE = 0.5V			-21.1	-21.7	-22.4	mA
	VLINE = 0.5V, TRMPWR = 4V (Note 1)			-19.8	-21.7	-22.4	mA
Output Clamp Level	ILINE = -30mA			-0.2	-0.05	0.1	V
Output Leakage	DISCNCT = 4V	TRMPWR = 0V to 5.25V	VLINE = 0 to 4V		10	400	nA
		REG = 0V	VLINE = 5.25V			100	μA
		TRMPWR = 0V to 5.25V, REG = Open VLINE = 0V to 5.25V			10	400	nA
Output Capacitance	DISCNCT = Open (Note 2)				10	12	pF
Regulator Section							
Regulator Output Voltage				2.8	2.9	3.0	V
Line Regulation	TRMPWR = 4V to 6V				10	20	mV
Load Regulation	IREG = 0 to -400mA				20	50	mV
Drop Out Voltage	All Termination Lines = 0.5V				1.0	1.2	V
Short Circuit Current	VREG = 0V			-450	-650	-850	mA
Current Sink Capability	VREG = 3.5V			8	20	25	mA
Thermal Shutdown					170		°C
Disconnect Section							
Disconnect Threshold				1.3	1.5	1.7	V
Threshold Hysteresis				100	160	250	mV
Input Current	DISCNCT = 0V				10	15	μA

Note 1: Measuring each termination line while other 17 are low (0.5V).

Note 2: Guaranteed by design. Not 100% tested in production.

THERMAL DATA

QP package: (see packaging section of UICC data book for more details on thermal performance)

Thermal Resistance Junction to Leads, θ_{jL} 15°C/W

Thermal Resistance Junction to Ambient, θ_{ja} $30^{\circ}\text{--}40^{\circ}\text{C/W}$

DWP package:

Thermal Resistance Junction to Leads, θ_{jL} 18°C/W

Thermal Resistance Junction to Ambient, θ_{ja} $33^{\circ}\text{--}43^{\circ}\text{C/W}$

J package:

Thermal Resistance Junction to Leads, θ_{jL} 40°C/W

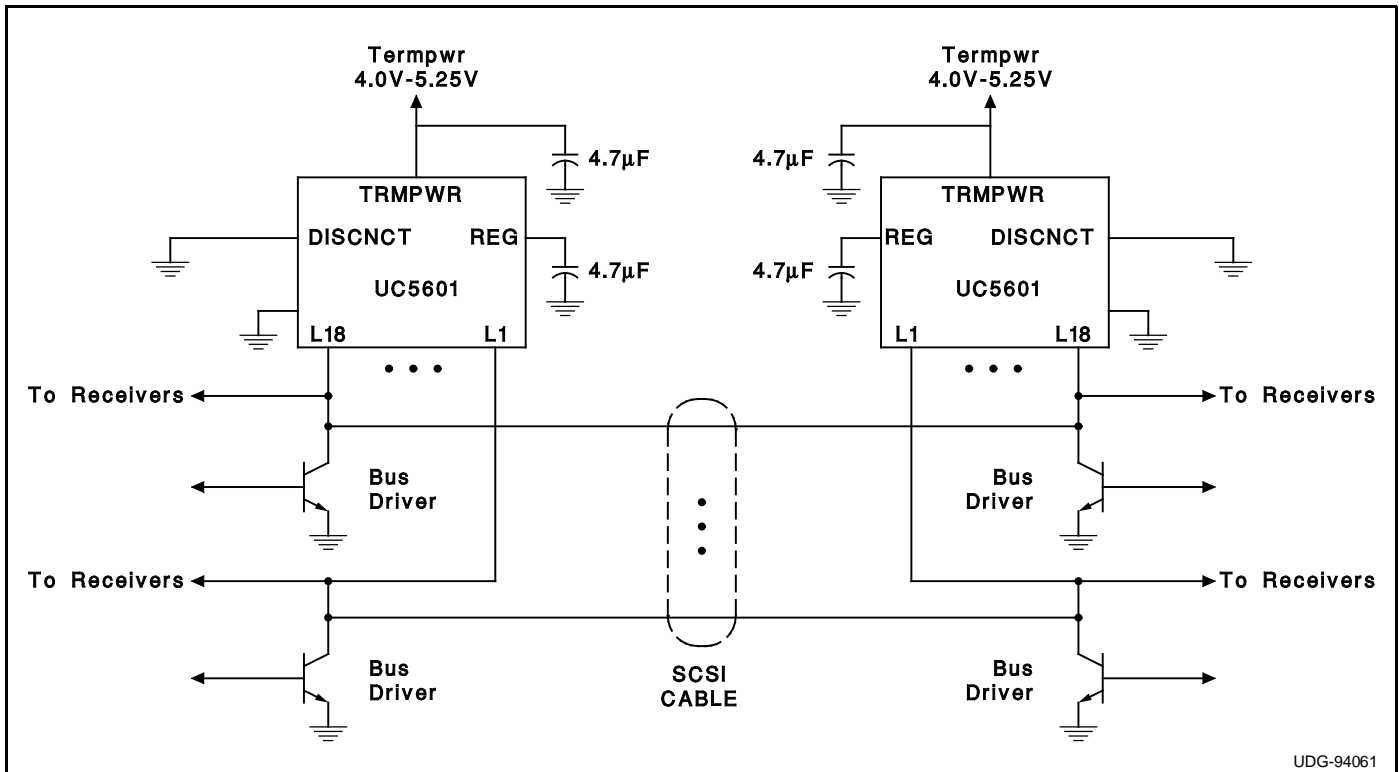

Thermal Resistance Junction to Ambient, θ_{ja} $75^{\circ}\text{--}85^{\circ}\text{C/W}$

N package:

Thermal Resistance Junction to Leads, θ_{jL} 50°C/W

Thermal Resistance Junction to Ambient, θ_{ja} $95^{\circ}\text{--}105^{\circ}\text{C/W}$

Note: The above numbers for θ_{jL} are maximums for the limiting thermal resistance of the package in a standard mounting configuration. The θ_{ja} numbers are meant to be guidelines for the thermal performance of the device/pc-board system. All of the above numbers assume no ambient airflow.

Typical SCSI Bus Configuration Using the UC5601

A Look at the Response of a SCSI-2 Cable

Figure 1 shows a single line of a SCSI cable. The driver is an open collector type which when asserted pulls low, and when negated the termination resistance serves as the pull-up.

Figure 2 shows a worst case scenario of mid cable de-assertion with a close proximity receiver. The voltage V_{STEP} is defined as:

$$V_{STEP} = V_{OL} + I_O Z_0$$

- V_{OL} = Driver Output Low Voltage
- I_O = Current from Receiving Terminator
- Z_0 = Cable Characteristic Impedance

$$I_O = \frac{V_{REG} - V_{OL}}{110}$$

In the pursuit of higher data rates, sampling could occur during this step portion, therefore it is important to ensure that the step is as high as possible to get the most noise margin. For this reason the UC5601 is trimmed so that the output current (I_O) is as close as possible to the SCSI max current spec of 22.4mA. The Termination impedance is initially trimmed on the IC to 110 ohms typical, then the regulator voltage is trimmed for the highest output current to within 22.4mA.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

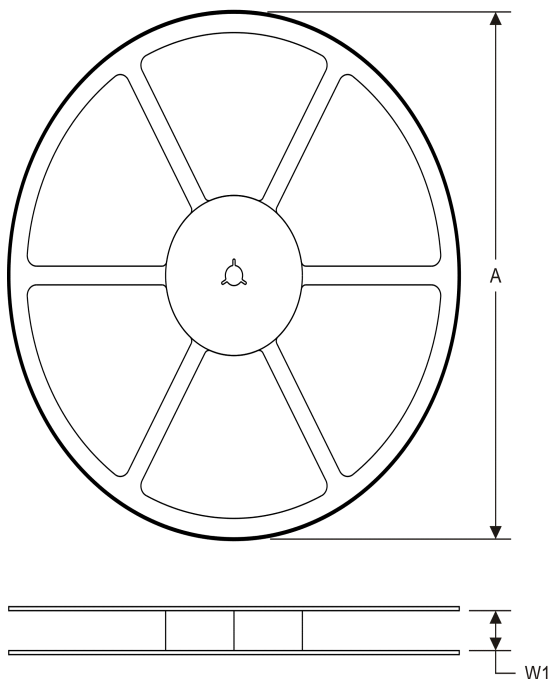

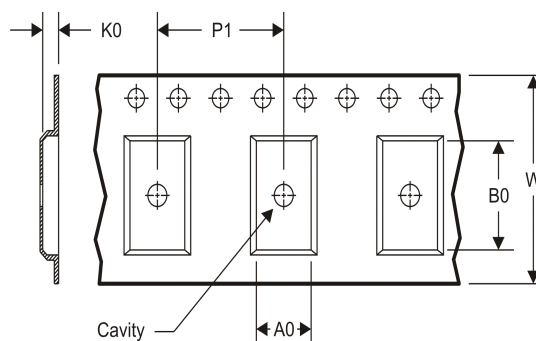

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
