

VISITRON

R59 SERIES

The R59 series tubes are widely used in theater sound projection equipment. This medium sized tube has long been prominent in 35 MM semi-portable systems. Its rugged dependability makes it exceptionally adaptable to industrial electronic equipment.

The R59 series is supplied with two types of cathode surfaces, "A" type sensitive to infra-red and "B" type sensitive to blue.

The blue sensitive Visitron tubes have a high response to blue radiation and insignificant response to red radiation. This tube will prove advantageous in sound reproductions involving a dye-image sound track in conjunction with an incandescent light source.

The R59 series is also available on special order with Corex D bulb for use in applications requiring response in the ultra-violet region. Among the many uses of this type tube are rapid and direct measurement of spectrum line intensities without recourse to photography and the measurement of ultra-violet intensities in biological and therapeutic work. These ultra-violet tubes are identified by the letter "C" (example R59CV-2). Price will be submitted upon application.
